FASTENER WELD

TechLite® Insulation has various options available for your adhesive and applicator needs. We sell all items individually so you are able to pick and choose the option that works best for your application.

- 8 oz. Can – Fastener Weld
(applicator not included)
- 6 oz. Plastic Applicator Can (empty)
- 20 oz. Metal Applicator Can (empty)
- Quart Can – Fastener Weld
(not pictured – no applicator)
- Gallon Can – Fastener Weld
(not pictured – no applicator)

**Please refer to your TechLite Price Schedule for pricing*

All seams for 300 & 800 Series jackets, both straight lap joints and circumferential lap joints, should be glued with Fastener Weld. This is important in both indoor and outdoor applications to prevent the ingress of water or wash down fluids into the TechLite® foam. In below ambient piping applications and severe wash down environments, all seams should be over-sealed with a factory approved RTV sealant to guarantee a positive vapor barrier seal.

To use, apply a bead of Fastener Weld along and just under the joint to seal the jacket permanently. Please refer to our Installation Procedures before applying.
