**Request-no.: 18720/01**  
**Your request of Jun 2, 2009**

Dear Mr. Henry

### **BASOTECT® G**

Basotect is made by polymerization and foaming of a melamine resin which is produced from melamine and formaldehyde. Due to this chemistry the Basotect foam splits off tiniest quantities of formaldehyde. As a matter of course Basotect complies with all EU and US regulations concerning formaldehyde emissions.

BASF controls formaldehyde emissions of Basotect regularly. Additionally, independent testing institutes have confirmed the extremely low formaldehyde release of Basotect.

In the manufacture of the product antimony or antimony compounds are not used as additives or ingredients.

**Notice:** Many substances are ubiquitous. The observance of all these substances is not part of BASF ongoing production control.

In view of the many factors that may effect processing and application of our products, these data do not relieve processor from carrying out own investigations and tests neither do these data imply any guarantee for certain properties nor the suitability of the product for a specific purpose. It is the responsibility of the recipient of our products to ensure that any proprietary rights and existing laws and legislation are observed.

Yours sincerely
